Factors which are material for the purpose of assessing the market risks associated with Bonds:

The Bonds may not be a suitable investment for all investors. Each potential investor in the Bonds must determine the suitability of that investment in light of its own circumstances. In particular, each potential investor should:

- (i) have sufficient knowledge and experience to make a meaningful evaluation of the Bonds, the merits and risks of investing in the Bonds and the information contained or incorporated by reference in this Securities Note and/or Registration Document or any applicable supplement;

- (ii) have access to, and knowledge of, appropriate analytical tools to evaluate, in the context of its particular financial situation, an investment in the Bonds and the impact the Bonds will have on its overall investment portfolio;
- (iii) have sufficient financial resources and liquidity to bear all of the risks of an investment in the Bonds, including where the currency for principal or interest payments is different from the potential investor's currency;
- (iv) understand thoroughly the terms of the Bonds and be familiar with the behaviour of the financial markets; and
- (v) be able to evaluate (either alone or with the help of a financial adviser) possible scenarios for economic, interest rate and other factors that may affect its investment and its ability to bear the applicable risks.

Modification and Waivers

The conditions of the Bonds contain provisions for calling meetings of bondholders to consider matters affecting their interests generally. These provisions permit defined majorities to bind all bondholders including bondholders who did not attend and vote at the relevant meeting and bondholders who voted in a manner contrary to the majority.

Please see the Bond Terms for the Bond Trustee's power to represent the Bondholders and the duties and authority of the Bond Trustee.

2 Risk Factors

Investing in the Bonds issued by the Issuer involves inherent risks. Prospective investors should consider, among other things, the risk factors set out in the Prospectus, including those related to the Issuer as set out in the Registration Document, before making an investment decision. The risks and uncertainties described in the Prospectus, including those set out in the Registration Document, are risks of which the Issuer is aware, and that the Issuer considers to be material to its business. If any of these risks were to occur, the Issuer's business, financial position, operating results, or cash flows could be materially adversely affected, and the Issuer could be unable to pay interest, principal or other amounts on or in connection with the Bonds. Prospective investors should also read the detailed information set out in the Registration Document dated 20 January 2022 and reach their own views prior to making any investment decision. The risk factors set out in the Registration Document and the Securities Note cover the Company and the Bonds issued by the Company, respectively.

In each category below, the Issuer sets out the most material risk, in the Issuer's assessment, taking into the negative impact of such risk on the Issuer and the Bonds and the probability of its occurrence. If any of the following risk were to materialize, either individually, cumulatively, or together with other circumstances, it could have a material adverse effect on the Company's business, results of operations, cash flows, financial conditions and/or prospects, which may cause a decline in the value of the Bonds and a loss of part or all of your investment.

Risk factors material to the securities

General

All investments in interest bearing securities have risk associated with such investment. The risk is related to the general volatility in the market for such securities, varying liquidity in a single bond issue as well as company specific risk factors. There are four main risk factors that sum up the investors' total risk exposure when investing in interest bearing securities with a floating interest rate: liquidity risk, interest rate risk, settlement risk and market risk (both in general and issuer specific).

Interest-rate risk

Interest rate risk is the risk that results from the variability of the NIBOR interest rate. The coupon payments, which depend on the NIBOR interest rate and the Margin, will vary in accordance with the variability of the NIBOR interest rate. The interest rate risk related to this bond issue will be limited, since the coupon rate will be adjusted quarterly according to the change in the reference interest rate (NIBOR 3 months) over the tenor of the Bonds. The primary price risk for a floating rate bond issue will be related to the market view of the correct trading level for the credit spread related to the bond issue at a certain time during the tenor, compared with the credit margin the bond issue is carrying. A possible increase in the credit spread trading level relative to the coupon defined credit margin may relate to general changes in the market conditions and/or Issuer specific circumstances. However, under normal market circumstances the anticipated tradable credit spread will fall as the duration of the bond issue becomes shorter. In general, the price of bonds will fall when the credit spread in the market increases, and conversely the bond price will increase when the market spread decreases.

The regulation and reform of "benchmarks" may adversely affect the value of securities linked to or referencing such "benchmarks" - Interest rates and indices which are deemed to be "benchmarks", (including NIBOR) are subject of recent national and international regulatory guidance and proposals for reform. Some of these reforms are already effective whilst others are still to be implemented. These reforms may cause such benchmarks to perform differently than in the past, to disappear entirely, or have other consequences which cannot be predicted. Any such consequence could have a material adverse effect on any securities linked to or referencing such a "benchmark". The Benchmarks Regulation could have a material impact on any Bonds linked to or referencing a "benchmark", in particular, if the methodology or other terms of the "benchmark" are changed in order to comply with the requirements of the Benchmarks Regulation. Such changes could, among other things, have the effect of reducing, increasing or otherwise affecting the volatility of the published rate or level of the "benchmark".

The Bonds are linked to NIBOR and there is a risk that any discontinuance or reforms of NIBOR may material adverse effect the pricing of the Bonds. No guarantees can be made as to the continuance of the current underlying reference rate of the Bonds and the possible consequences a potential discontinuance of NIBOR may have of the value of the Bonds.

Risk of being unable to repay the Bonds

During the lifetime of the Bonds, the Group will be required to make payments on the Bonds. The Issuer is dependent upon its and its subsidiaries' ability to generate cash flow from operations and to make distributions to the Issuer in order for the Issuer to make scheduled payments on the indebtedness, including the Bonds.

The future financial performance of the Group will be affected by a range of economic, competitive, governmental, operating and other business factors, many of which cannot be controlled, such as general economic and financial conditions in the business or the economy at large. A significant reduction in operating cash flows resulting from changes in economic conditions, increased competition or other events could increase the need for additional or alternative

sources of liquidity and could have a material adverse effect on the business, financial condition or results of operations, as well as the Group's ability to service its debt, including the Bonds, and other obligations.

If the Group is unable to service its indebtedness, it will be forced to adopt an alternative strategy that may include actions such as reducing or delaying capital expenditures, selling assets, restructuring, or refinancing indebtedness or seeking equity capital. The Group cannot assure investors that any of these alternative strategies could be affected on satisfactory terms, if at all, or that they would yield sufficient funds to make required payments on the Bonds and the Issuer's other indebtedness. In addition, any failure to make scheduled payments of interest and principal on outstanding indebtedness is likely to result in a reduction of credit rating, which could harm the ability to incur additional indebtedness on acceptable terms.

The Bonds are effectively subordinated to the secured debt of the Issuer

The Bonds will be the Issuer's direct senior unsecured obligations and will rank equal in right of payment (except as to claims preferred by operation of law) with all of its other existing and future senior indebtedness. The Bonds will be effectively subordinated to all of the Issuer's existing and future secured indebtedness to the extent of the assets securing such indebtedness. If the Issuer is involved in any bankruptcy, dissolution, liquidation or reorganization, the secured debt holders would, to the extent of the value of the assets securing the secured debt, be paid before the holders of the Bonds. In that event, a holder of Bonds may not be able to recover any principal or interest due to it under the Bonds.

The Bonds will be unsecured obligations and structurally subordinated to the liabilities of any of the Group's subsidiaries

Generally, creditors under indebtedness and trade creditors of the Issuer's subsidiaries will be entitled to payments of their claims from the assets of such subsidiaries before these assets are made available for distribution to the Issuer, as a direct or indirect shareholder. Accordingly, in the event that any of the Group's subsidiaries becomes subject to any foreclosure, dissolution, winding-up, liquidation, recapitalisation, administrative or other bankruptcy or insolvency proceeding, the Issuer's creditors (including the holders of the Bonds) will have no right to proceed against the assets of any such subsidiary, and creditors of the Group's subsidiaries, including financial indebtedness and trade creditors, will generally be entitled to payment in full from the sale or other disposal of the assets of such subsidiary before the Issuer, as a direct or indirect shareholder, will be entitled to receive any distributions from such subsidiary.

The trading price of the Bonds may be volatile

Historically, the market for non-investment grade debt has been subject to disruptions that have caused substantial volatility in the prices of securities similar to the Bonds. Any such disruptions could adversely affect the prices at which investors may sell their Bonds. In addition, subsequent to their initial issuance, the Bonds may trade at a discount from their initial placement, depending on the prevailing interest rates, the market for similar securities, the performance of the Issuer and other factors, many of which are beyond the Group's control.

Risks related to the market for the Bonds

The Bonds are a new issue of securities with no established trading history. Even though the Group will apply for listing of the Bonds on Oslo Børs (or any other regulated market), no assurance can be made that the Bonds will be successfully listed.

The Group has not entered into any market-making scheme to ensure liquidity of the Bonds. A liquid trading market for the Bonds may not develop or be maintained and investors may not be able to sell the Bonds quickly or at a favourable price. If an active market does not develop or is not maintained, the price and liquidity of the Bonds may be adversely affected.
